This sequence codes for amino acids 9-146 of mature porcine factor IX. Amino acids 1-8 were previously identified by amino acid sequencing as YNSGKLEE, where the glutamic acid residues are gamma carboxy glutamic acids in the mature molecule (Lollar, P. et al. Biochemistry 26, 7627-7636, 1987). Amino acids 1-146 constitute the gla domain, the two epidermal growth factor-like domains and the linker peptide region, which collectively make up the light chain of activated factor ix. The remainder of porcine factor ix consists of the activation peptide (residues 147-181) and the catalytic domain (residues 182-146). The cDNA-derived sequence of the activation peptide and catalytic domain has been previously reported (Sarkar, G. et al. Genomics 6, 133-143, 1990 and Sarkar, G. et al. PCR Meth. Appl. 2, 318-322, 1993) with corrections as noted in Brandstetter, H. et al. Proc. Natl. Acad. Sci. U.S.A. 100cation/Qualifiers
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Sus scrofa (pig)

Draft entry and sequence in computer-readable form for [1] kindly provided by F.S.Hagen.

[1] sequenced two alternatively spliced mRNAs that produced shortened signal peptides. One is presented as factor VIIb below. Location/Qualifiers
                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Eukaryota, Metazoa, Chordata, Craniata, Vertebrata, Euteleostomi, Mammalia, Eutheria, Primates, Catarrhini, Hominidae, Homo.

Draft entry and sequence in computer-readable form for [1] kindly provided by F.S.Hagen.

[1] sequenced two alternatively spliced mRNAs that produced shortened signal peptides. One is presented as factor VIIb below.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Mammalia; Eutheria; Primates; Catarrhini; Hominidae; Homo.
